

# Mohamed Sayed Abdelkader

Backend .NET Developer

Cairo, Egypt | +20 1029684685 | mo.sayed2037@gmail.com | github.com/MoSayed335 | linkedin.com/in/mo7amed-abdelkader | mosayed335.github.io/portfolio

## PROFESSIONAL SUMMARY

Results-driven Backend .NET Developer with hands-on experience engineering scalable, secure RESTful APIs and full-stack MVC applications using ASP.NET Core, C#, and SQL Server. Delivered 6+ production-like backend systems with 34+ API endpoints across E-Commerce, Education, Entertainment, and Service Marketplace domains. Proficient in JWT Authentication, Role-Based Authorization, Clean Architecture (SOLID, CQRS/MediatR, Repository Pattern), and third-party integrations including Stripe Payment Gateway, Firebase FCM, and SignalR. Completed a Backend Development Internship at CodeAlpha, gaining practical experience in testing, debugging, and delivering production-quality backend features.

## TECHNICAL SKILLS

**Languages & Frameworks:** C#, ASP.NET Core Web API, ASP.NET Core MVC

**Architecture & Design:** Clean Architecture, SOLID Principles, Repository Pattern, DTO Pattern, Layered Architecture

**Databases:** SQL Server, Entity Framework Core (EF Core), LINQ

**Testing & QA:** Unit Testing (xUnit/NUnit), Integration Testing, Postman API Testing, Test Case Design, Debugging, Test-Driven Development (TDD) fundamentals

**Tools:** Git, GitHub, Postman, Visual Studio, Scalar

**Security:** JWT Authentication, Refresh Tokens, Role-Based Authorization, Policy-Based Authorization, OTP Verification, OAuth2

**Integrations:** Stripe Payment Gateway, SignalR, Email Services, FluentValidation, AutoMapper

**Soft Skills:** Problem Solving & Analytical Thinking | Team Collaboration & Communication | Time Management | Adaptability | Attention to Detail | Leadership & Mentoring

**Languages:** Arabic — Native | English — Professional Working Proficiency

## EXPERIENCE

### Backend Development Intern — CodeAlpha (Remote)

Jun 2026

- Completed a one-month remote Backend Development Internship, applying ASP.NET Core and SQL Server skills to real-world backend tasks
- Practiced structured debugging and manual test-case verification of API endpoints to validate functionality before delivery

### Independent Backend Developer — Self-Employed

Jan 2025 – Present

- Delivered 6+ backend systems using ASP.NET Core, covering E-Commerce, Student Management, Exam Management, Cinema booking, and Service Marketplace domains
- Engineered 34+ RESTful API endpoints with secure JWT authentication, Role-Based Authorization, and Clean Architecture across all projects
- Actively developing a large-scale Domestic Services Booking Platform as a final graduation project at Eraa Soft

### Backend .NET Trainee — Eraa Soft

Jan 2025

- Engineered production-like backend applications using ASP.NET Core Web API and SQL Server, delivering 3+ fully functional systems within the training period
- Implemented JWT Authentication, Role-Based Authorization, and Stripe Payment Gateway integration across multiple projects
- Architected RESTful APIs following Clean Architecture and SOLID principles to ensure maintainability and scalability

## PROJECTS

### Domestic Services Booking Platform (In Progress) | [github.com/AhmedWEB22/Servers-Booking-Platform](https://github.com/AhmedWEB22/Servers-Booking-Platform)

- Architecting a full-scale service marketplace using ASP.NET Core MVC with Clean Architecture and CQRS/MediatR, covering 10 modules with 3-role access system (Client / Worker / Admin)
- Engineered a 5-step booking wizard with real-time worker availability, worker acceptance flow, recurring bookings, and cancellation/refund policy management
- Integrated Stripe/PayPal payment gateway with escrow, multi-method support (InstaPay, Fawry, Vodafone Cash), automatic PDF invoicing, and client/worker wallet system
- Implemented SignalR live chat + worker tracking, Firebase FCM push notifications, Google Maps worker discovery, OAuth2 social login, OTP verification, and dispute-managed review system

### E-Commerce Web API | [github.com/MoSayed335/Ecommerce-API](https://github.com/MoSayed335/Ecommerce-API)

- Architected a production-grade REST API with 34 endpoints across 6 modules using Clean Architecture and Repository Pattern
- Engineered JWT Authentication with Refresh Token rotation, 3-tier Role-Based Authorization, OTP email verification, and Stripe checkout — migrated full system from MVC to clean Web API architecture

### E-Commerce MVC | [github.com/MoSayed335/EcommerceMVC](https://github.com/MoSayed335/EcommerceMVC)

- Built a full-stack web application using ASP.NET Core MVC (.NET 9) with Bootstrap UI, covering product browsing, cart, and order placement workflows
- Applied Identity-based authentication, Role-Based Authorization, EF Core with SQL Server, and Stripe Payment Gateway; later refactored into a clean REST API

### Cinema Management System | [github.com/MoSayed335/Cinema](https://github.com/MoSayed335/Cinema)

- Built a full-stack Cinema booking application (ASP.NET Core MVC, .NET 9) managing movies, showtimes, seat types, and bookings with automated pricing
- Engineered a 4-tier RBAC system (SuperAdmin / Admin / Employee / Customer) with scoped permissions; integrated Stripe for secure ticket checkout

## EDUCATION

### Bachelor of Computer Science — Cairo Higher Institute for Engineering, Sciences and Technology

Expected Graduation: 2027 | Relevant Coursework: Data Structures & Algorithms, Database Systems, Object-Oriented Programming, Software Engineering, Operating Systems
